# New Information for Authors

With the advent of a new U.S. copyright law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. Therefore, the following agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire" it must be signed by the employer.) *If you wish to submit a manuscript to the editors, please attach a copy of this page, filled in and signed.*

**Transfer of Copyright Agreement**

(Must be signed and returned to the Journal Editor before the manuscript can be considered for publication.)

The article entitled_____

is herewith submitted for publication in _____.
It has not been published before. If and when the article is accepted for publication I, as the author, hereby agree to transfer (for U.S. Government employees: to the extent transferable) to John Wiley & Sons, Inc., all rights under existing copyright laws except for the following, which the author(s) specifically retain(s):

1. The right to make further copies of all or part of the published article for my use in classroom teaching;
2. The right to re-use all or part of this material in a compilation of my own works or in a textbook of which I am the author;
3. The right to make copies of the published work for internal distribution within the institution which employs me.

I agree that copies made under these circumstances will continue to carry the copyright notice which appeared in the orginal published work. I agree to inform my co-authors, if any, of the above terms.

INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. XIII, ix–x (1978)

# Information for Contributors

1. Manuscripts should be submitted to

   Professor P.-O. Löwdin
   Quantum Chemistry Group
   University of Uppsala
   Box 513, S-751 20
   Uppsala 1, Sweden

   All other correspondence should be addressed to

   Journals Department
   John Wiley & Sons, Inc.
   605 Third Avenue
   New York, New York 10016, U.S.A.

2. It is the preference of the Editors that papers be published in the English language. However, if the author desires that his paper be published in French or German, it is necessary that a particularly complete and comprehensive synopsis be furnished in English.
3. Manuscripts should be submitted in triplicate (one *original*, two carbon copies), typed *double spaced* throughout and on one side of each sheet only, on a *heavy* grade paper with margins of at least 2.5 cm on all sides. With the advent of the new U.S. copyright law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer of copyright agreement to be used for the *International Journal of Quantum Chemistry* was printed in the January 1978 (June, 1978) issue. (Additional copies are available from the Editor.) A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire" the agreement must be signed by the employer.)
4. A short synopsis (maximum length 200 words) is required. The synopsis should be a summary of the entire paper, not the conclusions alone, and should preferably be prepared in English, French, and German.
5. The paper should be reasonably subdivided into sections and, if necessary, subsections.
6. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be handwritten, please print clearly and leave ample space above and below for printer's marks; please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters of the alphabet wherever confusion may arise (e.g., k, K, $\kappa$). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs.

   The nomenclature sponsored by the International Union of Pure and Applied Chemistry is requested for chemical compounds. Unit abbreviations should follow the practices of the American Institute of Physics. Chemical bonds should be correctly placed, and double bonds clearly indicated. Valence is to be indicated by superscript plus and minus signs.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript. Abbreviations of journal titles should conform to the *Bibliographic Guide for Editors & Authors* published by the American Chemical Society.

   References should be limited to literature citations. Explanatory or supplementary material should be treated either as footnotes to text or appendices.

8. All tables *must* be original typescript or in a form suitable for photographic reproduction (see paragraph 10). Each table should be supplied on a separate sheet (not interspersed with text). Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
9. Please supply legends for all figures and compile these on separate sheet.
10. It is particularly important that all figures be submitted in a form suitable for reproduction. Good glossy photographs are required for halftone reproductions. For line drawings (graph, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. Artwork is generally reduced so that the type in the figures is about 2.5 mm high. It is the usual practice to submit drawings that are twice the size of the final reproduction; the maximum final size of figures for this journal is 4⅞ × 7¼ inches. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given in paragraph 1.

    It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. A copy of the approved permission request should be forwarded to the Editor on acceptance of the manuscript.
11. Senior authors will receive 50 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the proof.
12. The publisher will do everything possible to ensure prompt publication. It will therefore be appreciated if manuscripts and illustrations conform from the outset to the style of the journal. Contributors should use the *Style Manual* of the American Institute of Physics; papers will otherwise have to be returned to the author for revision.

    Corrected proofs must be sent back to the publisher within two days to avoid the risk of the author's contribution having to be held over to a later issue.

INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. XIV, 865–866 (1978)

# Information for Contributors

1. Manuscripts should be submitted to

   Professor P.-O. Löwdin
   Quantum Chemistry Group
   University of Uppsala
   Box 513, S-751 20
   Uppsala 1, Sweden

   All other correspondence should be addressed to

   Journals Department
   John Wiley & Sons, Inc.
   605 Third Avenue
   New York, New York 10016, U.S.A.

2. It is the preference of the Editors that papers be published in the English language. However, if the author desires that his paper be published in French or German, it is necessary that a particularly complete and comprehensive synopsis be furnished in English.
3. Manuscripts should be submitted in triplicate (one *original*, two carbon copies), typed *double spaced* throughout and on one side of each sheet only, on a *heavy* grade paper with margins of at least 2.5 cm on all sides. With the advent of the new U.S. copyright law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer of copyright agreement to be used for the *International Journal of Quantum Chemistry* was printed in the January 1978 (June, 1978) issue. (Additional copies are available from the Editor.) A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire" the agreement must be signed by the employer.)
4. A short synopsis (maximum length 200 words) is required. The synopsis should be a summary of the entire paper, not the conclusions alone, and should preferably be prepared in English, French, and German.
5. The paper should be reasonably subdivided into sections and, if necessary, subsections.
6. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be handwritten, please print clearly and leave ample space above and below for printer's marks; please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters of the alphabet wherever confusion may arise (e.g., k, K, $\kappa$). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs.

   The nomenclature sponsored by the International Union of Pure and Applied Chemistry is requested for chemical compounds. Unit abbreviations should follow the practices of the American Institute of Physics. Chemical bonds should be correctly placed, and double bonds clearly indicated. Valence is to be indicated by superscript plus and minus signs.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript. Abbreviations of journal titles should conform to the *Bibliographic Guide for Editors & Authors* published by the American Chemical Society.

   References should be limited to literature citations. Explanatory or supplementary material should be treated either as footnotes to text or appendices.

8. All tables *must* be original typescript or in a form suitable for photographic reproduction (see paragraph 10). Each table should be supplied on a separate sheet (not interspersed with text). Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
9. Please supply legends for all figures and compile these on separate sheet.
10. It is particularly important that all figures be submitted in a form suitable for reproduction. Good glossy photographs are required for halftone reproductions. For line drawings (graph, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. Artwork is generally reduced so that the type in the figures is about 2.5 mm high. It is the usual practice to submit drawings that are twice the size of the final reproduction; the maximum final size of figures for this journal is $4\frac{7}{8} \times 7\frac{1}{4}$ inches. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given in paragraph 1.

    It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. A copy of the approved permission request should be forwarded to the Editor on acceptance of the manuscript.
11. Senior authors will receive 50 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the proof.
12. The publisher will do everything possible to ensure prompt publication. It will therefore be appreciated if manuscripts and illustrations conform from the outset to the style of the journal. Contributors should use the *Style Manual* of the American Institute of Physics; papers will otherwise have to be returned to the author for revision.

    Corrected proofs must be sent back to the publisher within two days to avoid the risk of the author's contribution having to be held over to a later issue.
